A Push for More Organ Transplants Is Putting Donors at Risk

People across the United States have endured rushed or premature attempts to remove their organs. Some were gasping, crying or showing other signs of life.

Tucker v. Lower

No. 2831 (Richmond, Va., L. & Eq. Ct., May 23, 1972).

133

Heart Donor Identified

The Medical College of Virginia's heart transplant patient was listed as satisfactory yesterday afternoon; meanwhile, the identity of the donor was learned late yesterday.

He was Bruce Oliver Tucker, 33, of 109 E. Charity St. here, who suffered fatal brain injuries last Friday evening when he fell from a three-foot high wall he was sitting on and hit his head on concrete, according to a friend. The accident occurred between 11th and 12th Sts. on East Cary Street.

Tucker, who was a Negro, died Saturday at MCV of "irreparable" brain injuries, according to one source. He worked at the Schluderberg-Kurdle Co., Inc. (Eskay) a

Eskay egg plant, said Tucker had worked there for "20 or 22" years, and described him as a "good employe who was always punctual." Eggs are candled and graded at the Cary Street Eskay plant.

Bowles said he was not at work last week due to illness, but understood that Tucker's accident occurred sometime after the plant had closed Friday evening.

A brother of the donor, Grover Tucker of Dinwiddie, when asked if his brother were the donor, said "Yes, he's the one."

Another brother, William Tucker of Richmond, declined to confirm or deny that Bruce Tucker was the donor, but added, "If it were done, it was done without authorization." He declined further comment.

State medical officials could not be reached for comment

that's problem **2**

301

failure

determine BD using "accepted standards"

302

that's

DBD

303

let's move to a **second** DDR violation

304

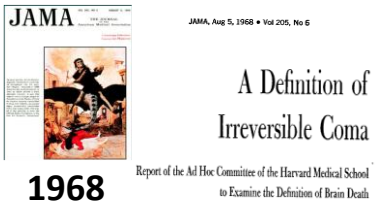
DCD

305

1960s

OT was DCD

306



1968

307

1970 →

308

50 years
almost all
OT was BD

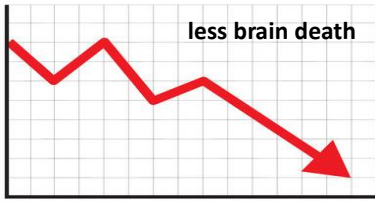
309

BD – can keep organs perfused **whole** time

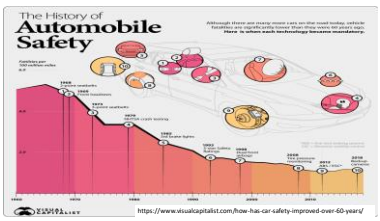
310

but

311



312



313

1990s

314

DCD

315

316

catastrophically critically ill (but **alive** patient)

317

family decides to **stop** LST

318

likely that heart will **stop**

319

320

even when heart stops

321

not dead **yet**

322

UDDA

323

"**irreversible** cessation of circulatory & respiratory functions"

324

2 problems

325

problem **1**

326

cessation is **not irreversible** as UDDA requires

327

we **can** reverse cessation of circulatory function

328

we **won't** (because Pt does not want that)

329

330

but

331

we **could**

332

response

333

we interpret "irreversible" as "**permanent**"

334

not what UDDA says

335

problem **2**

336

even if UDDA required only "permanent" cessation

337

is even **that** satisfied?

338

after heart stops

339

standoff

observation

340

ensure heart does not restart **spontaneously**

341

how long?

342

343

after 5 min

344

if **no** circulatory function

345

→ dead

346

WLST
asystole
stand off
declaration

347

why
5 min

348

hearts **have** restarted at 4:20

349

DDR
problem

350

some clinicians wait only **2 min**

351

ASTS American Society of Transplant Surgeons

Sept. 2025

ASTS Position Statement on a 5-minute observation period

"**heterogeneous** waiting times ranging from 2 to 5"

352

353

but

354

unclear that circulatory cessation was **irreversible**

355

heart **might** have restarted

356

at 2:09
or
at 3:44

2d problem

366

even if guidelines **were** legally valid

367

368

AJS The American Journal of Surgery

Anji E Wall et al., **Variation** in donation after circulatory death hospital policies in a single donor service area, Am J Surg . 2022;224(1 Pt B):595-601.

369

"significant variability … uniform standards are needed"

370

371

let's move to a specific **type** of DCD

372

NRP

373

normothermic
regional
perfusion

374

TA-NRP

375

DCD requires absence of circulation

376

but

377

bad for organs, especially heart

378

minimize
warm
ischemia

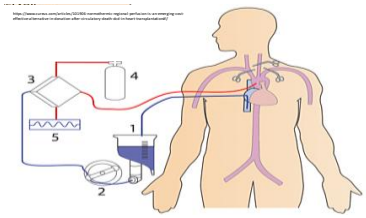
379

so …

380

restart circulation
in the donor

381



382

improves
organ quality

383

problem

384

said dead **because**
irreversible cessation
of circulatory function

385

reversed it

386

basis for death
determination
no longer true

387

response

388

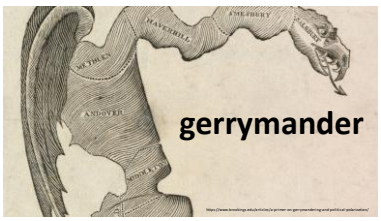
before restart → cut or clamp vessels to brain

389

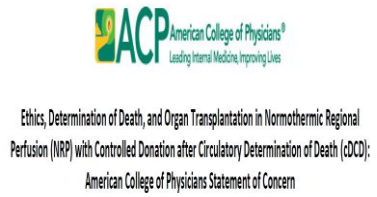
even if no longer **circulatory** dead, w/o perfusion to brain, patient is **brain** dead

390

391



392



393

"ethical & legal propriety … has **not** been met"

394

395

"**unclear** whether NRP violates the DDR"

396

The Irreversible Cannot Be Reversed: Normothermic Regional Perfusion Is Euthanasia

397

NRP

398

really only regional?

399

only a **hypothesis**

do not **know** no perfusion to brain

400

458

but

459

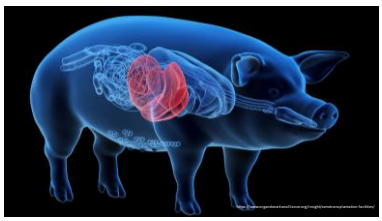
460

UDDA is strict & demanding

461

we would **lose** many organs

462



463

464

465

change UDDA

466

instead of aligning **guidelines** to law

467

align **law** to guidelines

468

we tried

469

Uniform Law Commission
Better Laws. Stronger States.

470

UDDA →
RUDDA

471

match
legal criteria to
medical standards

472

but

473

474

so …

475

~~RUDDA~~

476

The New York Times

Donor Organs Are Too Rare. We Need a New Definition of Death.

July 30, 2025

477

478

drop DDR

479

~~DDR~~

480

let people **decide** when they are "dead enough" to donate organs

481

5 reasons

482

1 **already** tried

483

In re T.A.C.P.

No. 79582.

Supreme Court of Florida

Nov. 12, 1992.

484

2 growing calls

485

The NEW ENGLAND JOURNAL of MEDICINE

Perspective

FEBRUARY 6, 2020

Altruism *in Extremis* — The Evolving Ethics of Organ Donation

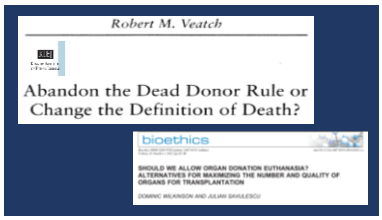
Lisa Rosenbaum, M.D.

486

3 foremost bioethicists

487

488



489

4 public opinion

490

Abandoning the dead donor rule? A national survey of public views on death and organ donation

Michael Nair-Collins, Sydney R Green, Angelina R Sutin

491

70% support procuring organs even if **not** dead

492

5 honest transparent

493

no DDR
≠
expand OT

494

matching rules to practice

495

496

in sum

497

conflict
DDR ***v*** OT

498

ignore mismatch
change guidelines
change law
drop DDR

499

conclusion

500

increase
number & quality of organs

501

but

502

zero sum situation

503

more certain death → fewer organs

504

more organs → less certain death

505

506

utility DDR compliance

507

how much **uncertainty of death** can we tolerate in OT?

508
